

Next Generation Vaccine Protection

Even after your power and utilities have failed, VFCNEXGEN™ continues to provide early warning alerts and temperature data to mobile devices and computers, while maintaining up-to-the minute uncompromised compliance records in our secure cloud servers.

VFCNEXGEN™ is the only patent-pending temperature management solution of its kind designed to detect problems with your refrigeration system faster than any other existing technology.

Don't settle for risky systems that offer limited capabilities and can only perform under ideal conditions. Have confidence that you're protected and VFCNEXGEN™ will deliver successful results in every conceivable scenario.

Secure audit trails of all system changes, alert messages, and physical inspections ensure user accountability. The system will confirm when alert messages are received as well as when responders arrive on-scene to perform physical inspections of your valuable inventory and refrigeration system. Alert messages can escalate to additional personnel when responders fail to react in a timely manner.

EXCEPTIONAL BENEFITS CRITICAL TO YOUR FACILITY

- Reduces risk of vaccine loss and replacement costs - Improved safety - Ensures vaccine viability
- Automatic re-calibration & advanced replacement program with no down time
- Wireless glycol probes eliminate wire-related refrigeration leaks and connection problems
- Automated and simplified temperature compliance procedures
- Unmatched protection, peace-of-mind, and enhanced compliance
- Meets and vastly exceeds CDC and FDA specifications
- Alert-receipt and physical response confirmation technology
- Continuous real-time off-site data storage and protection
- Effective risk management solution

Simple. Powerful. Affordable.
